

Personal Portfolio Website Project Report

Project Goal

Build a full-stack personal portfolio website to showcase projects, skills, education, achievements, and contact information.

Technology Stack

Frontend: HTML, CSS, JavaScript or React.js

Backend: Node.js/Express.js or Django/Flask

Database: MongoDB, MySQL, or PostgreSQL

Deployment: Vercel, Netlify, Render, or Heroku

Key Features

- Responsive Home Page
- About Me Section
- Skills Showcase
- Projects Management with Database
- Resume Download
- Contact Form
- Admin Dashboard for CRUD Operations

System Architecture

Frontend communicates with backend APIs. Backend processes requests and stores project details in the database.

Database Design

Projects Table/Collection: id, title, description, technologies, github_link, live_link, image_url.

API Endpoints

GET /projects

POST /projects

PUT /projects/:id

DELETE /projects/:id

Deployment Steps

Deploy frontend on Vercel/Netlify and backend on Render/Heroku. Connect database using environment variables.

Expected Outcome

Gain experience integrating frontend, backend, database, APIs, authentication, and deployment into a live project.
